Appendix E

Guidelines for the Supervision of Apprentices/Trainees

Effective supervision allows apprentices to develop the knowledge and skills they need to competently perform electrical work in a safe working environment, free from electrical and work health and safety risks.

Determining supervision levels

The level of supervision required (direct, general or broad) will depend upon:

- the type of work performed and the associated risks
- the level of training and competence of the apprentice.

Type of work

Supervisors need to consider the type of work to be performed and the possible risks associated with that work. Consider:

- the task to be performed
- the location
- the environment
- work health and safety risks
- electrical risks.

Young workers often do not have the same understanding of risk that comes from experience on the job. Supervisors should assess the level of risk based on the apprentice, not their own understanding of the risk associated with the work.

Supervisors must include the apprentice in the risk assessment process and together manage any risks they identify to develop the apprentice's skills in this area.

Factors to consider include:

- the work location (e.g. residential, commercial, industrial, mining)
- whether it is a new installation or alterations/additions to an existing installation
- whether the work will be performed near live electrical equipment
- the voltage and potential fault current levels associated with the installation.

Training and competence

The technical knowledge, practical skills and safe working ability of the apprentice need to be considered when determining the most appropriate level of supervision. The supervisor should use:

- information from the apprentice's registered training organisation
- on the job training records
- their own observations and knowledge of the apprentice performing the work.

Supervision levels

Effective supervision ensures work is carried out safely and correctly and apprentices develop the knowledge, skills and ultimately the competency to transition from being an apprentice to a tradesperson.

The three levels of supervision, direct, general and broad, aim to ensure apprentices develop their knowledge and skills in the technical aspect of the trade, as well as the understanding of the risks associated with work and the ways to manage those risks. Apprentices need to transition through the three stages of supervision to best prepare for the completion of their apprenticeship. An apprentice who is never provided the

opportunity to work under broad supervision is likely to struggle as a tradesperson, creating a risk to themselves and others.

Supervision levels for apprentices should diminish gradually over the course of an apprenticeship. Remember that each apprentice develops at a different rate. Time in the apprenticeship is not the only indicator of an apprentice's readiness to transition to different levels of supervision.

Direct supervision

Direct supervision is when a supervisor constantly monitors the apprentice. The supervisor should always remain readily available (within sight and/or earshot).

Direct supervision is usually appropriate where:

- the apprentice is new to the task
- the apprentice has not demonstrated ability to perform the task to a minimum standard
- the assessed risks determine direct supervision is required for the task
- the apprentice has not completed off-the-job training that supports competent performance of the task
- unplanned events are beyond the apprentice's ability to manage
- the work includes live work or work near exposed live parts.

General supervision

General supervision is when a supervisor is not constantly reviewing the apprentice but remains available in person (this does not include face time or video conferencing) for assistance or instruction as required.

General supervision is usually appropriate where:

- the apprentice has demonstrated their ability to perform the task safely to minimum standards without the need for constant intervention
- the apprentice has demonstrated an understanding of any risks and can manage those risks appropriately
- the assessed risks determine general supervision is required for the task
- the apprentice has an appropriate level of knowledge and practical skill from completing off-the-job and on-the-job training
- the apprentice has demonstrated an ability to manage or seek assistance with reasonably predictable unplanned events.

Broad supervision

Broad supervision is when a supervisor only needs to make occasional face to face contact at intervals determined suitable by the supervisor. Adequate apprentice supervision cannot solely be provided from an offsite location by electronic means such as phones, radios and webcams.

Broad supervision is usually appropriate where:

- the apprentice has demonstrated their ability to perform the task safely to acceptable standards without the need for supervisor intervention
- the apprentice has demonstrated an understanding of any risks and has the ability and demonstrated how to manage those risks appropriately
- the assessed risks determine broad supervision is required for the task
- the apprentice has a significant level of knowledge and practical skill from completing off-the-job and on-the-job training
- the apprentice has demonstrated an ability to manage or seek assistance with unplanned events.

This table details some of the electrical tasks that an apprentice performs and gives suggestions for typical amounts of time spent under which types of supervision for that work.

The table is a guide only and each apprentice needs to be assessed individually. It is based on the E-Oz Energy Skills National Supervision Guidelines for Electrotechnology Apprentices.

Supervision types and times by type of work guide

Type of work	Typical time served (in months)				
	0 - 6	6 - 12	12 - 24	24 - 36	36 - 48
Installation of cable support and mechanical protection.	Direct	Direct / General	General	Broad	Broad
Installation of low voltage cabling and terminating accessories.	Direct	Direct / General	General	General	Broad
Installation of low voltage electrical equipment.	Direct	Direct	Direct / General	General	Broad
Fault finding, repair and maintenance of de-energised low voltage electrical installations and equipment.	Direct	Direct	Direct	Direct / General	Broad
Isolation and lockout. Proving de-energisation of low voltage electrical installations and equipment (No access to exposed low voltage within the first 6 months).	Direct supervision. The supervisor is ultimately responsible for proving the isolation before work commences.			Direct	Direct / General ¹
De-energised verification (visual inspection and testing) of low voltage electrical installations and equipment.	Direct	Direct	Direct	Direct / General	General ² / Broad ³
Energised verification (visual inspection and testing) of low voltage electrical installations and equipment.	RTO Simulated only.	RTO Simulated only	RTO Simulated only	RTO Simulated only	Direct
Commissioning (testing for correct operation/function) low voltage electrical installations and equipment (No access to exposed low voltage within the first 6 months).	Direct	Direct	Direct	Direct / General	General ⁴

¹ General supervision should be restricted to apprentices who have completed training in isolation and lockout procedures and the supervisor has performed a risk assessment and ensured the apprentice is competent to undertake the task.

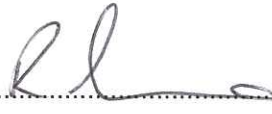

² General supervision is only appropriate after the apprentice has completed the relevant units of competency in installation verification.

³ Broad supervision should only be considered after the apprentice has successfully completed their Capstone assessment

⁴ General supervision is only appropriate after the apprentice has completed the relevant units of competency in installation verification.
